Firstlincoln
Technologies

Providing high scaled business solution ...

Introduction > Overview

Firstlincoln Technologies is a privately owned, full service web present provider registered with the Nigeria Corporate Affairs in the year 1997. We specialize in designing, hosting and maintenance of web site incorporated with software and database

Development.

At Firstlincoln, you're sure of a global catch of audience over the world wild web, as we are equipped with the latest hardware and software that are essential for the development and publishing of your web site on the world wild web. We are so confident that once a potential customer tries our services they become a permanent "hooked" for being a satisfied customer.

Mission

Our goal is to provide you with good quality, fast and reliable web sites design, hosting, e-mail services and e-commerce solutions.

We want your jump to the web to be as efficient as possible from start to finish.

Above all, to supply you with easy-to-use tools to analyze and maintain your e-mail while we take care of the technical side.

Your satisfaction is our priority because we believe, 'There is no better salesman than a happy customer'.

Why Website?

Whatever your business it can benefit from having a web site. If your competitors have web sites you need one too to maintain your competitive advantage, but as well as this, your web site can benefit your organisation in many other ways.

A brochure - but unlike traditional paper brochures your site is easily updated, always current and cost-effective.

Your web site acts like a company brochure, but unlike a traditional company brochure your web site is always current and can be accessed 24 hours a day.

Your web site is also high quality, full colour, up-to-date and interactive.

Your site can be updated quickly and regularly, keeping product offerings and prices accurate without the costs associated with updating traditional printed literature and the delays of printing, publishing and distribution. A more environmentally friendly solution than traditional paper-based literature and without the distribution costs.

Your products, services and company information can be seen worldwide 24 hours per day. Rather than having to wait for a brochure, customers can instantly access the information they want.

Increase your customer base

Your web site is accessible to hundreds of millions of users worldwide.

Your products or services have a worldwide audience - something that would be hard to achieve by other methods.

In addition to this, your website allows everyone to compete on an even playing field, from tiny organisations to the largest of corporations.

Reach a new audience

Many people like to find out more about a company and their services before they contact them and a web site can give your organisation the edge over a competitor who doesn't have a web site.

And many regular internet users now prefer to search for a service, product or organisation on the internet rather than through a more traditional method like the Yellow Pages. If your organisation is not on the internet you could be missing out.

New methods of communication

Not only can you communicate to your customers through your web site, but they can also contact you through it. Your customers will have new ways to contact you. Online e-mail facilities allow people to e-mail you easily. Online forms produce more specific communications and feedback. You can also encourage communications by setting up online quizzes, competitions and interactive questionnaires - valuable methods of collecting visitor demographics and generating leads.

Streamline your processes

Your web site can save your organisation time and money. Information such as company news, announcements, new product launches, technical information and user guides can be published on the web site for viewing and download saving you printing and distribution time and money.

E-commerce functionality can be incorporated into your website allowing consumers to order their products and services online, greatly reducing administration expenses. Your e-commerce site will enable customers to order any time so extending your trading hours without the normal necessary human presence or office expenses. Receiving payments over the internet can reduce your collection costs to a fraction of the old ways of invoicing and collection.

Integrate your web site functionality with your back office processes to create a truly automated office system. For example - connect your online ordering system with your stock system so stock availability is always current, automate your technical support processes and introduce new online methods for customers to obtain technical assistance.

Improve customer service

Your customers will be able to find up-to-the-minute information on product and service ranges, availability, costs through your site - 24 hours a day, 7 days a week.

Your customers will have new ways to contact you through electronic forms or e-mail facilities on your website.

E-commerce facilities offering online ordering can save your customers time and administration costs.

You can offer your customers a more personal online experience by creating tailored areas on your site just for use by that particular customer. These sections can have secure access.

New marketing possibilities

Being online opens a number of new advertising options for your business. The internet unites the benefits of print and television advertising (text and graphics plus moving images and sound) and eliminates the usual time and space limitations of traditional media forms.

Methods of advertising available include:

- advertising banner placement on your own site or on other sites
- promotional e-mails which can have images and links to your site, particular areas of your site or even specific products
- downloadable games and screensavers, tailor-made and branded for your business
- digital newsletters

Unlike traditional media forms, the Internet is interactive. It can be an effective, low cost one-to-one marketing tool.

You can create an image for your business with your site. No matter how small your business, with a well designed and constructed web site your business can look like a PLC on the Web.

Improved internal communications

You can have a web site purely for internal use or you can have an intranet extension of your company web site. This site can be used for internal announcements and news, communications, information database and information sharing with areas for employees to post data. Online discussion forums can improve morale and act as valuable information exchanges.

If you don't have a web site FilT can establish your first web presence advising you of the most effective web strategy for your business with the future in mind.

If you already have a web site, is your business fully benefiting from it?

FilT can help you make sure your business is getting all of the above benefits from your web site.

Operational Principle

We have a responsibility to protect each client and to provide the best services available. The following operational principles are designed to

ensure these obligations are met.

Our web design and hosting operation are guided by internationally accepted standards, with particular emphasis on:

- Confidentiality of information and detail of site profile with respect to e- commerce and database driven web site.
- Provision of qualitative web template and design plans with fast and reliable hosting facilities.
- Keeping to time frame.
- Cost effectiveness.

Judging from the nature of clients' needs, the executive personnel appoint an overall team leader who acts as the principal liaison officer between our team and client. Close working relationship with clients at different stages of design is our routine practice in order to ensure ultimate satisfaction of our customers.

Most importantly, our web hosting package comes with a custom web site design that ensures that your hosting plan is never vacant at any instance.

Our relationship with our clients is strictly confidential and under no condition should the clients use, duplicate, transfer (by any electronic or manual means) or extract any part of our team developed

software/web application for other purpose order than the purpose and the firm it was design to suit.

In all cases, We start with our proven track of designed questionnaire. It makes your website design process a real breeze. This procedure will determine your needs in advance and let us know exactly what you need, making sure it is done right the first time.

Services [> Overview](#)

Our range of service includes:

Web site design

Firstlincoln technologies specialize in helping small, medium and large business get a presence on the internet quickly and economically. We design our sites with search engine compatibility in mind.

Web Site Maintenance plan

We believe Web sites are like children

They should not be born and then abandoned. With the right teachers and a little bit of love, they can develop into successful members of our virtual society.

Our Active Site Management programs are just like "prepaid calling cards", in that you pay a flat monthly fee and have a bundle of hours you can use for HTML programming, Internet marketing, graphic design, e-commerce and database programming, as well as online

promotion and media buying. Plus, we'll proactively submit your site to the search engines each quarter to help enhance your rankings.

Think about it: for less than the price of one Webmaster with basic programming skills, you can have a full team of graphic designers, online marketing specialists, and experienced database programmers at your fingertips. Not a bad deal.

For more details on our maintenance plan, contact us and we'll make a custom management program just for you!

Software Development plan

Our software development plans are base on two levels as shown:

This are software's that we or other software vendors have build for general business operation and automation but can be customized to suit other company or firm operations and services. The prices for this range of softwares are estimated base on points of installation. To get a copy of the range of software under this plan, please mail info@firstlincoln.net

With our integrated family of tool, server, and client technologies we have been able to delivery a wide range of business solutions from websites to Rich server Applications across platforms and devices. This range of software start with a design questionnaire which enables us to know our clients aim and objectives with the functions of the software we will be designing.

Provide fast Internet dial up connection to your customers, adding value to your existing services without stress. A DSVR dial up connection allows you to access not just your server, but any computer on the Internet. The accounts are provided to allow direct access to the network and internet on which your files are stored, for increased transfer speeds.

Which ever of our plan you might be interested in, we advice you start by filling our design questionnaire located at the end of this booklet. It makes your website design process a real breeze. This procedure will determine your needs in advance and let us know exactly what you need making sure it is done right the first time! Refer to the last four pages for the questionnaire.

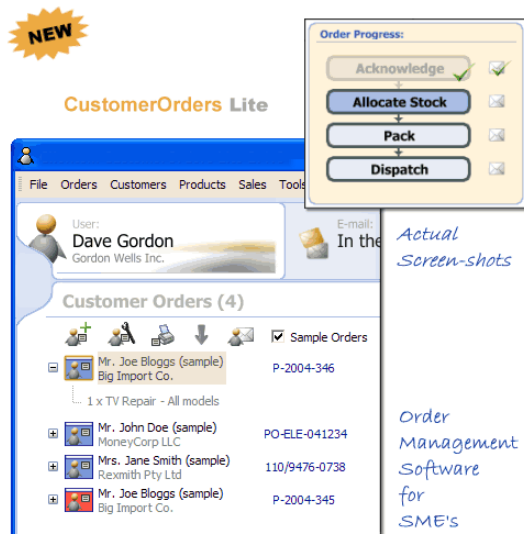

Software's Portfolio

Restaurant/ Supermarket Point of Sales Management Software (RPSM)

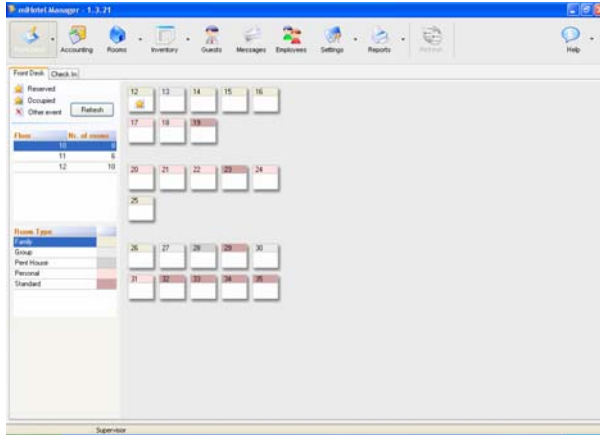

RPSM is a new generation of restaurant management software for Windows. It is a complete solution, beginning with taking orders from patrons, and ending with billing and tax reports. The user interface is carefully optimized for high-speed input of a patron's order and the prevention of common mistakes. It's designed for using on multiple computers, and contains reliable and secure authorization levels.

Customer Orders Management Software

CustomerOrders Lite is an Order Management System for small and medium sized enterprises (SME's). Using CustomerOrders Lite you will save around 80% of the time you spent using the 'patchwork' (Outlook, ACT!, Excel, Access,.....) of other programs to achieve the same results!

miHotel Manager is a Windows® based **Property Management Software (Hotel Management Software)**.

User friendly interface, high speed and stability, client-server architecture, all these characteristics allows you to easily manage all the tasks for your hotel / motel.

User Defined Fields for high flexibility, high-quality graphical representation of
